

A horoscope or a Kundli can be calculated by an astrologer or Jyotishi. The Jyotishi will ask for your correct date of birth, your correct time of birth and your correct place of birth. Only these three basic information are needed to make your horoscope.

There are two ways to get your horoscope calculated.

1. To have your horoscope calculated by a Jyotishi (astrologer) by hand. In this process the Jyotishi will take some to do some mathematic computations to make your horoscope.
2. To get hold of a good astrology software. There are many softwares available today. All you have to do is to fill in the above mentioned three birth details and your horoscope will be calculated by the software.

The software can calculate your horoscope but it cannot analyse and predict from it in a proper way. For that you will need a Jyotishi who will use his experience and Jyotish knowledge to interpret your horoscope.
